Meeting Minutes

Meeting organized by	Paolo Calafiura	**Participants**	Julien Poffet, Andrea Cavalli, Yushu Yao, Sébastien Binet, Charles Leggett
Date	September 16, 2008	**Office**	50B-3215

Subjects

- We presented the development state of VML. We realized the creation and the opening of an entry using the VMware snapshots. We realized the differential snapshots management, but we already studied how to manage incremental snapshots.
- We almost finished the realization of the import and export commands.
- With the VMware's snapshot utility, we cannot choose which part of the disk we want to store into the repository. For example, the swap and the temporary files are also stored into the repository entries, but we don't need them.
- The next features we have to realize are:
  - o Finish the import and export commands.
  - o Incremental snapshots with VMware.
  - o Download a CernVM machine from the website and automatically import it into the repository.
  - o Investigate how to avoid to copy VM's useless files into the repository (like the swap and the temporary files).
